# iMist2 Setup Guide – Part 1

## If retrofitting iMist2-ready remote hardware, see mistaway.com/25550 for instructions.

## **Connect Gateway to Internet**

- Locate the modem or router that provides an internet connection to customer's property.
- Thread antenna (yellow stripes) onto coax connector on gateway.
- Connect gateway to router with Ethernet cable.
- Connect gateway to power with adapter. Orient connector as shown (ridges on top) and gently push the connector into power port.
- Indications: Red Power, Blue Internet on, Green connection with iMist.
- All three lights will come on. After 3 secs, green and blue lights will go off. In about two minutes, after gateway completes bootup and downloads any firmware updates, green and blue lights should come on and stay on.

#### **Add Customer and Associate Gateway**
